Tokenomics	eight
Roadmap	nine

INTRODUCTION

“Codes” seem to have won the trust of man with the introduction of Blockchain and its products. Ever since the inception of Bitcoin, man has grown a mindset that codes are more trustworthy hence the birth of products tweaking codes to help man with his financial insecurities. This mindset has birthed a new generation of creators and innovators.

Products like Aave, Uniswap, pancakeswap, etc. have fulfilled one of man’s core financial wants: fostering financial transactions that aren’t officiated by banks, brokers, or any other intermediary. This isn’t a war between banks and their users, it’s an upgrade that frees man and gives him a neutral ground.

Take for example, an average man who needs a loan from a bank, he requests. Asides from him having the legal rights to such a loan based on collateral, there’s a chance of biased judgement from the bank’s representative.

INTRODUCTION

*“Just a hunch...I don’t trust him,” says the Bank manager.
Man’s want gets denied by another’s view... This is what
Blockchain and its products seek to eliminate.*

Over time, there have been upgrades on codes to perform better and optimize functions for man. Ranging from the introduction of single-chain to cross-chain functionality. Man is known to evolve and the codes can see this, we the 3swap team can see this, hence the birth of 3swap.

3Swap is a cross-chain dex (decentralized exchange) built on various EVM compatible chains that allow you to swap two tokens built on the same chain for another on a different chain.

3Swap is Dex1.0 renovated!

PROBLEMS AND SOLUTIONS

- **Flexibility**

With over 10,000 tokens in circulation and on different blockchains, it is safe to conclude that swapping one at a time can be boring (that's if you intend swapping all).

Of course, having the ability to swap two tokens for one wouldn't make much of a difference but try telling that to a Defi enthusiast who needs to quickly swap his shitcoins because of a piece of fundamental news like; "Elon is selling his xxx coins"

He'd wish he had four hands.... Well, he's got 3Swap!

PROBLEMS AND SOLUTIONS

- **Fees**

With 3swap, your transaction fee is optimized. The cross-chain function + the ability to swap two tokens for one in one click mitigates the extra network fees you'd use in swapping and moving tokens across various blockchains when transacting with conventional dexes.

Confused?

Let's get practical...

"You intend swapping your \$Link and \$Ethereum tokens for \$Realm tokens, you'd have to either use a centralized exchange or a dex first to convert the two said tokens to \$Bnb tokens before heading to pancakeswap to get your \$Realm tokens."

But with 3swap, you do that transaction in one click with less fees and ease.

PROBLEMS AND SOLUTIONS

• Liquidity Sustenance

This has been a problem associated with dexes due to the volatility in the market. The goal of an average crypto enthusiast (liquidity providers) is to be in profit but in a case of a downtrend, liquidity providers encounter impermanent loss and this, in turn, creates a ripple effect in liquidity sustenance of dexes.

Do we have a permanent solution to this?

No, but we have found a way to put you in profit regardless of what the market's health says. 3Swap is introducing an NFT-backed liquidity pool that allows you to mint an NFT representing a pool and by holding, you forever earn liquidity pool rewards.

For example, NFT A is representing a REALM-BNB-ETH pool, when you mint, 80% of the revenue is split into buying Realm, Bnb, and Eth and added to the pool on your behalf. The pool emission is sent to you as the holder of its NFTs.

Pool rewards aren't the only benefits associated with holding our NFTs. Partnerships are in place and those partnerships give more utility to our NFTs.

FEATURES

STAKING

You earn passive income staking the native token of our dex, \$SAP.

SWAP

You can swap tokens of different chains in one click. Cross-chain is simplified.

FARMING

You earn Juicy APYs and APRs on your farms.

NFT

“NFT meets utility”

It is not a promise, it is a fact. The contract has been built and it is smart..winks*

LIQUIDITY POOL

You earn a share of the transaction fees when you provide liquidity for pools with your tokens. With 3Swap, you don't just earn, you earn more! Three tokens are involved this time.

ROADMAP

PHASE 1

- 3Swap team development
- 3Swap community development

PHASE 3

- 3Swap Bridging
- 3Swap NFT
- 3Swap Farming
- 3Swap Launch Pad

PHASE 4

- 3Swap dive into Dex metaverse

PHASE 2

- 3swap testnet Development
- Partnership with Blockchain Companies
- Awareness and FundRaising
- 3swap Mainnet Development
- 3swap collaboration with Coingecko, CoinMarketCap, DexScreener

TOKENOMICS

Total Supply: 500m

TGE- 20% (100m)

Liquidity - 20% (100m)

Staking & Liquidity Mining - 25% (125m)

Team & Advisors - 10% (50m)

Marketing - 7% (35m)

Strategic Partners - 5% (25m)

Private Round - 3% (15m) at the rate of \$0.006

Seed Round - 4% (20m) at the rate of \$0.008

IDO - 6% (30m) at the rate of \$0.01
